

# ODU MEDI-SNAP<sup>®</sup>

HDMI     
ODU HIGH SPEED DATA TECHNOLOGY

# ODU MEDI-SNAP®

## FEATURES

- Lightweight
- Easy installation and maintenance
- Space-saving design
- High chemical resistance
- Fully sterilizable
- Quick mating with push-pull locking
- Easy-to-release break-away function
- Disposable solution available
- IEC 60601-1 compliant

## APPLICATIONS

- Medical
- Industrial
- Digital test and measurement

All shown connectors and cable assemblies are defined without breaking capacity (COC) according to IEC 61984:2008 [VDE 0627:2009-11].

Unless otherwise explicitly stated (for example: mains and high voltage), all shown connectors are rated to safety extra low voltage (SELV) of less than 50 V AC / 75 V DC, according to IEC 61140:2016 [VDE 0140-1:2016-11].

For more details, please refer to page [110](#).

ODU MEDI-SNAP® has UL recognition as described under file E110586.

All dimensions are in mm.

Some figures are for illustrative purposes only. Subject to change without notice. Errors and omissions excepted. We reserve the right to change our products and their technical specifications at any time in the interest of technical improvement. This publication supersedes all prior publications.

This publication is also available as a PDF file that can be downloaded from [www.odu-connectors.com](http://www.odu-connectors.com)

- + Continuous traceability
- + Retention period for technical documents
- + Supplier management

## PUSH-PULL LOCKING FUNCTIONALITY

The proven push-pull locking ensures establishing connections easily in less than a second. It is **self-securing** – this means that an accidental release by pulling on the cable can be ruled out. During the mating process, the connector’s locking claws will lock into place in the corresponding grooves in the receptacle and form a dependable connection between the connector and the receptacle. Consequently, when the connection is properly established, an unintentional demating of the connection by pulling on the cable cannot take place. The connection can only be released deliberately, by just pulling back the connector’s outer sleeve.

## BREAK-AWAY FUNCTIONALITY

The efficient break-away locking allows an easy mating and demating of connections within fractions of a second just like the Push-Pull locking. But furthermore it also features an **emergency release** which enables demating the connection when needed by pulling on the cable. During mating, the connector’s locking claws will lock into place in the corresponding grooves in the receptacle and form a dependable connection between the connector and the receptacle. The sloping shape of the locking claws ensures the “breaking away” of the connection when the connector or cable is pulled with a defined force.

# PRODUCT FEATURES AT A GLANCE

## APPLICATIONS AND MATERIALS

The ODU MEDI-SNAP® housings are available in PSU, PEI and brass. Standard color for the housings is Gray or Black. Additional colors for the housings are available in PSU, upon request. Color codings are available with up to 8 different colors.

The flexibility of the ODU MEDI-SNAP® series allows adaptation to suit a wide range of requirements in medical and industrial applications as well as in the digital measurement and testing sector.

Under general application conditions, the temperature range of the ODU MEDI-SNAP® connectors is between -50 °C and a maximum of +120 °C, even up to +134 °C in the case of autoclavable connectors (see page 121). For cable assemblies, please also consider the temperature range of the cable and overmolding (see page 19).

## IEC 60601-1:2005 (3RD EDITION)

Technical specification of connector only

The technical requirements stated in the IEC 60601-1:2005 refer almost exclusively to protection from electrical shock. In order to reduce the risk as much as possible for the patient as well as for the operator, the plastic version of ODU MEDI-SNAP® offers you maximum safety due to

- Up to 4 kV AC test voltage to conductive components and therefore two means of patient protection (2MOPP)<sup>1</sup>
- Protection from electrical discharge (ESD) up to ±15 kV (air discharge)
- Protection from electrical shock (socket inserts only) in unmated condition due to the design (test finger proof)

# TURNUED CONTACTS

Turned contacts are available in diameter 0.5 mm to 2 mm in the following termination types:

## Solder, crimp and PCB

Mating cycles	min. 5.000
Material	Brass
Plating	Gold

## STANDARD PIN AND SOCKET CONTACTS

Information on diameters, termination types and current carrying capacity can be found after in the section after the inserts.

<sup>1</sup> Working voltage of medical device max. 250V AC (degree of pollution 2)

# STEP BY STEP TO THE PERFECT CONNECTION

ODU offers high-quality connectors and comprehensive services for the complete assembly. From connectors to watertight potting, we provide the complete system from a single source.

# YOUR WAY TO AN INDIVIDUAL CONNECTION: HOW TO CONFIGURE WITH THE PART NUMBER KEY.

This shows you how ODU's part number key is composed. In the first part of the configuration, select the connector plug housing (such as style and size) of the connector. In the middle part of the part number key, you configure the contact insert and then the cable entry.

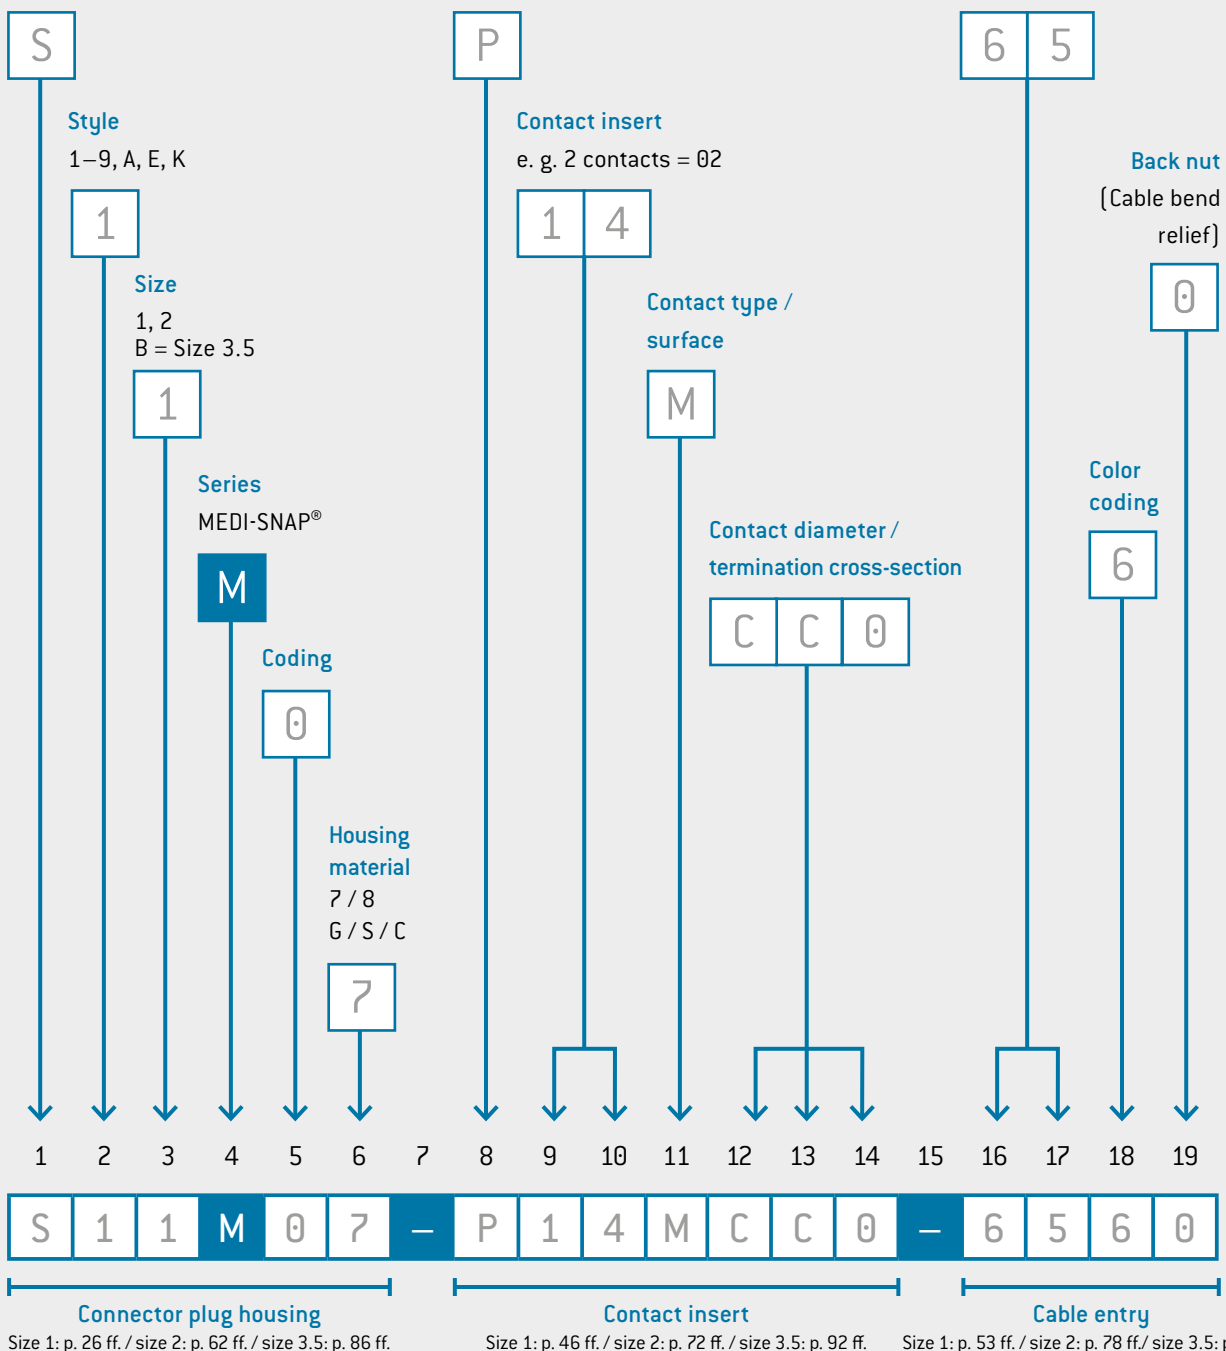

### Type

- A = Break-away connector
- G = Receptacle
- K = In-line receptacle
- S = Plug
- W = Right-angled plug

### Insulator material

- P = PEEK (standard)
- T = PBT
- θ = PSU

### Cable collet system

# YOUR WAY TO AN INDIVIDUAL CABLE ASSEMBLY SOLUTION

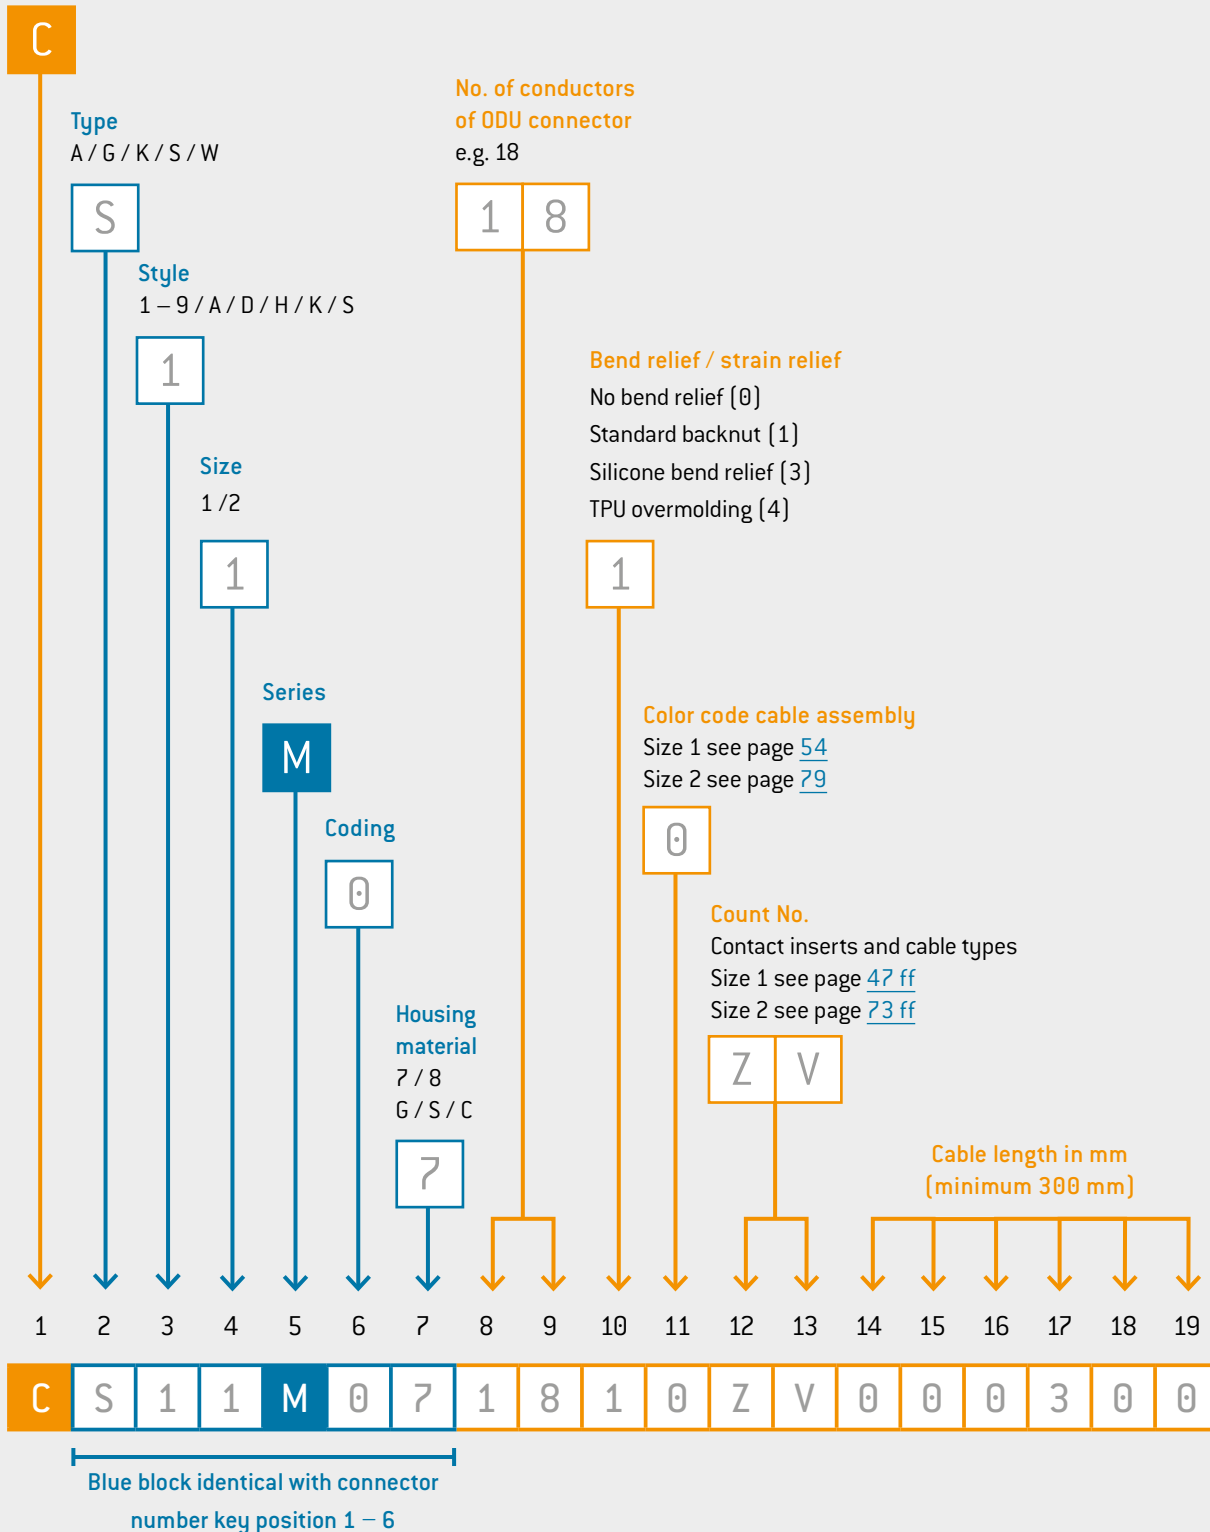

## HOW TO CONFIGURE WITH THE CABLE NUMBER KEY

This shows you how ODU's cable number key is composed. In the first part of the configuration – after the "C" for cable, please insert the first 6 positions of your connector number key.

In the middle part of the cable number key, you configure the bend relief, color and count number.

The last 6 positions determine the length of the cable in mm.

# ODU MEDI-SNAP® PLASTIC / METAL HOUSING SIZE 1 – SUMMARY

The ODU MEDI-SNAP® with plastic housing in size 1 is coded by pin and groove. These circular connectors can have a variety of configurations: numerous styles of connectors, receptacles and in-line receptacles as well as various termination types, contact inserts and color codings.

- Coding over pin and groove
- 8 color codings
- 6 mechanical codings
- 2–14 contacts
- 3 termination types
- Contacts for solder, crimp and PCB termination
- A selection of numerous connectors as well as receptacles and in-line receptacles
- IP50 / IP64 and IP67 available in mated condition
- Up to 5,000 mating cycles

<sup>1</sup>As per IEC 60601-1:2012 (VDE 0750-1:2013-12).

Max working voltage of the medical device 250 V AC (degree of pollution 2).

Valid for plastic receptacles in combination with plastic plugs only.

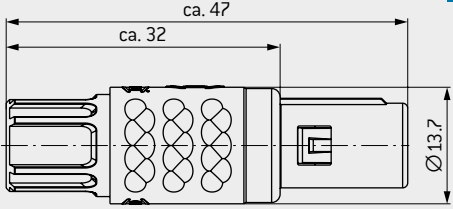

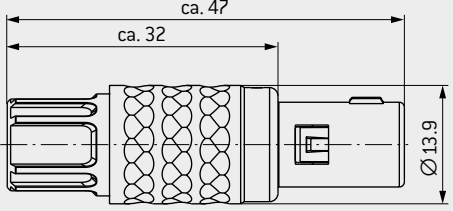

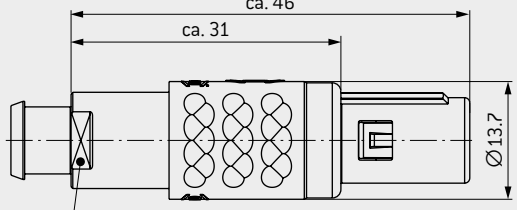

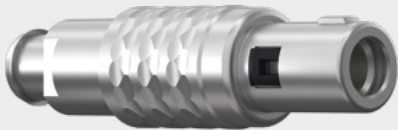

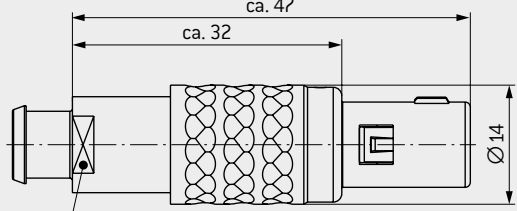

All cable assemblies with plastic connectors in the catalog fulfill 1M00P/1M0PP.

To ensure the required clearance and creepage distance in the termination area of plug style A5, a corresponding potting sleeve must be used (not included in the scope of delivery).

<sup>2</sup>IP68 in unmated condition with respect to the device

# ODU MEDI-SNAP® PLASTIC HOUSING SIZE 2 – SUMMARY

The ODU MEDI-SNAP® with plastic housing in size 2 is coded by pin and groove. These circular connectors can have a variety of configurations: numerous styles of connectors and receptacles as well as various termination types, contact inserts and color codings.

- Coding over pin and groove
- 8 color codings
- 3 mechanical codings
- 3–26 contacts
- 2 termination types
- Contacts for solder and PCB termination
- A selection of numerous connectors and receptacles
- IP50 and IP64 available in mated condition
- Up to 5,000 mating cycles

STRAIGHT PLUG – PUSH-PULL		P. 62	2,000 mating cycles
IP50		S 1	
IP 64		S 4	
BREAK-AWAY PLUG		P. 64	2,000 mating cycles
IP 64		A 5	

PL Plastic

For assembly instructions, please refer to our website: [www.odu-connectors.com/downloads/assembly-instructions](http://www.odu-connectors.com/downloads/assembly-instructions)

RECEPTACLE		P. 66	5,000 mating cycles
IEC 60601-1: 2 M00P <sup>1</sup> and 1 M0PP <sup>1</sup>			
IP50		PL	G 1
IEC 60601-1: 2 M00P <sup>1</sup> and 2 M0PP <sup>1</sup>			
IP64		PL	G 4
IEC 60601-1: 2 M00P <sup>1</sup> and 1 M0PP <sup>1</sup>			
IP50		PL	G 5

<sup>1</sup>As per IEC 60601-1:2012 (VDE 0750-1:2013-12).  
 Max working voltage of the medical device 250 V AC (degree of pollution 2).  
 All cable assemblies in the catalog fulfill 1M00P/1M0PP.  
 To ensure the required clearance and creepage distance in the termination area of plug style A5, a corresponding potting sleeve must be used (not included in the scope of delivery).

# ODU MEDI-SNAP® PLASTIC HOUSING SIZE 3.5 – SUMMARY

The ODU MEDI-SNAP® with plastic housing in size 3.5 is coded by pin and groove. These circular connectors can have a variety of configurations: numerous styles of connectors and receptacles as well as various termination types, contact inserts and color codings.

- Coding over pin and groove
- 8 color codings
- 3 mechanical codings
- 19 / 41 contacts
- 2 termination types
- Contacts for solder PCB termination
- A selection of numerous connector and receptacle styles
- IP50 and IP68 available in mated condition
- Up to 5,000 mating cycles
- Hybrid inserts including signals and media feedthrough

ODU MEDI-SNAP®

## ODU DISPOSABLE SOLUTIONS

Summary and examples

# SUMMARY

## ODU DISPOSABLE SOLUTIONS

The ODU MEDI-SNAP® Disposable products offer a reliable and economical limited use solution for large-volume projects that can be used for at least 25 mating cycles.

### TAILORED TO YOUR APPLICATION

- Large selection of different numbers of pin count
- Various sizes
- Large selection of cables on request
- Various colors on request

### FURTHER ADVANTAGES AT A GLANCE

Intermateable with the ODU MEDI-SNAP® series – mating connectors are

- Sterilizable, autoclavable
- Durable – up to 5.000 mating cycles

IEC 60601-1 compliant:

- Up to 2 MOPP / 2 MOOP
- Up to 15 kV ESD test voltage

Total cost of ownership in focus:

- Optimized manufacturing technologies / assembly processes
- Complete assembled system solutions

### ODU OFFERS SOLUTIONS FOR THE FOLLOWING APPLICATIONS

- Dermatology
- Endoscopy
- Respirator
- Patient monitoring
- And many more

# EXAMPLES FOR DISPOSABLE SOLUTIONS

## ODU MEDI-SNAP®

Break-away cable assembly size 1 and 2

- Intermateable with reusable receptacles

## ODU MEDI-SNAP®

Snap-in receptacle size 1

- Style G2
- Up to 14 contacts
- Match also with metal plugs

See also overview [plugs size 1 \(p.26\)](#)

## ODU MEDI-SNAP®

Snap-in receptacle size 2

- Style GB
- Up to 34 contacts (high density)
- 2 MOOP / 1 MOPP

## ODU MINI-MED®

plug cable assembly and panel mount receptacle

- Up to 6 contacts
- Smallest footprint

See also ODU MINI-MED® [Brochure](#)

ODU MEDI-SNAP®

## TOOLS

The following pages contain tools and wrenches to ensure that your ODU connectors function flawlessly.

## NOTE ON ADHESIVE

Recommended adhesive for the back nut  
Scotch-Weld™, DP 190 (Gray)

**ODU PART NUMBER: 890.204.000.030.025**

Recommended cleaning agent: Isopropyl alcohol

Caution! Cracks may appear later if unauthorized adhesives and cleaning agents are used

For assembly instructions, please refer to our website: [www.odu-connectors.com/downloads/assembly-instructions](http://www.odu-connectors.com/downloads/assembly-instructions)

ODU MEDI-SNAP®

## TECHNICAL INFORMATION

ODU connectors ensure perfect and reliable transmission of power, signal, data and other media in a wide variety of applications.

Further information can be found on the following pages.

# EXPLANATIONS AND INFORMATION ON SAFETY REQUIREMENTS

## GENERAL

All the technical information listed in this catalog has been determined by drawing on various standards. Unless otherwise stated, standard IEC 61984:2008 (VDE 0627:2009-11) "Connectors – Safety requirements and tests" has been used to dimension and determine the values provided.

This international standard applies to connectors and cable assemblies with rated voltages above 50 V and up to 1,000V AC and DC and rated currents up to 125 A per contact, for which either no detail specification exists or the detailed specification calls up this standard for safety aspects. For connectors with rated voltage up to 50 V, this standard may be used as a guide. In this case, reference is made to IEC 60664-1 for clearance and creepage distances. This standard may also be used as a guide for connectors with rated current higher than 125 A per pole. This standard does not apply to connectors in or on equipment where application specific safety requirements for connectors exist.

All the connectors and cable assemblies shown here are without breaking capacity (COC) according to IEC 61984:2008 (VDE 0627:2009-11).

All of the voltage data listed in this catalog is only valid when the connectors and inserts and cable assemblies have been correctly mounted and are being used properly.

# EXPLANATIONS AND INFORMATION ON VOLTAGE RATINGS FOR LOW VOLTAGE INSERTS

## GENERAL WORKING VOLTAGE (RATED VOLTAGE)

All shown connectors and cable assemblies with the exemption of inserts with explicitly stated operating voltage (for example mains and high voltage inserts) are default rated to fulfil safety extra low voltage (SELV), based on IEC 61140:2016 (VDE 0140-1:2016-11) "Protection against electric shock – Common aspects for installation and equipment". The connectors and cable assemblies are default rated to a voltage of less than 50 V AC / 75 V DC. If the application requires a higher operating voltage and the standard EIA-364-20F:2019-02 is applicable, please refer to the following section. In case other standards rule a specific use of the connector, then the application specific safety criteria shall be considered first. These other standards must be evaluated during the engineering and design of the equipment.

## VOLTAGE RATING ACCORDING EIA-364-20F:2019-02 (TEST VOLTAGE / WITHSTANDING VOLTAGE)

**Caution: For operating voltages above 50 V AC / 120 V DC, life is in danger!**

The test voltage values in the catalog are determined according to EIA-364-20F:2019-02 method A, test condition I (sea level up to 2,000 m) "Withstanding Voltage – Test Procedure for Electrical connectors, Sockets and Coaxial Contacts". The test voltage represents the physical limit of the connectors and cable assemblies and is usually set at 75 % of the break-down voltage. According to EIA-364-20F:2019-02 and former MIL-STD-1344 method 3001 it is specified to set the operating voltage (rated voltage) to 1/3 of the test voltage acc. to EIA-364-20F:2019-02 method A, test condition I (sea level up to 2,000 m). Please note, the subsequently explained procedure according to EIA-364-20F:2019-02 does not consider protection against electric shock. Suitable precautions (protective measures) such as touch protection, protective insulation, protective separation, protective earth conductor etc. must be implemented.

Please consult us for advice on how the proper connector and cable assembly can be chosen and thereby indicate the safety standard, which your product has to meet.

# EXPLANATIONS AND INFORMATION ON VOLTAGE RATINGS AND SAFETY REQUIREMENTS FOR MAINS AND HIGH VOLTAGE INSERTS

The clearance and creepage distances are determined as specified in IEC 60664-1:2020 [VDE 0110-1:2022-07]. In case other standards rule a specific use of the connector and/or cable assembly, then the application specific safety criteria shall be considered first. The most important variables that influence safety together with the matching electrical parameters are explained in more detail below in the section IEC 60664-1:2020 [VDE 0110-1:2022-07] "Insulation coordination for equipment within low-voltage systems".

Since this catalog cannot take all product standards into consideration, the following standard in terms of voltage data is used:

**IEC 60664-1:2020 [VDE 0110-1:2022-07] "INSULATION COORDINATION FOR EQUIPMENT WITHIN LOW-VOLTAGE SYSTEMS"** [The texts given here are excerpts from the standard]

According to this standard, the minimum clearance distances for equipment not connected directly to the low voltage mains should be measured according to

- the possible continuous voltages,
- the temporary overvoltages, or
- periodic peak voltages

(see Table F.8 / F.9 in IEC 60664-1:2020 [VDE 0110-1:2022-07]).

This is what is known as a basic safety standard, which regulates the minimum requirements for dimensioning clearance and creepage distances, as well as their inspection. The standard applies to equipment used up to an altitude of 2,000 m above sea level and with a rated alternating voltage of up to 1,000 V and a nominal frequency of up to 30 kHz or a rated direct voltage of up to 1,500 V. The correction factors stated in the standard must be taken into account for applications at altitudes over 2,000 m above sea level. This standard covers those cases where corresponding product standards do not define any values for clearance and creepage distances, nor lay down any requirements for solid insulation, or where no product standards are even available.

**The following general specifications have been defined for the dimensioning of mains and high-voltage inserts:**

- The clearance (based on inhomogeneous field) and creepage distances (based on pollution degree 3 in mating area) are determined as specified in this standard.
- Isolation between electrical circuits (functional insulation between the contacts) or between an electrical circuit and local grounding (contact with grounded connector components) has been defined as basic insulation. If "double insulation" or "reinforced insulation" is required in your application, the voltage data provided in this catalog is no longer valid.

In the following explanations, the term "nominal voltage" is the value of the given voltage as indicated by the utility or mains supplier for classification of the overvoltage category.

## DIMENSIONING OF RATED SURGE VOLTAGE

Value of an impulse withstand voltage that is indicated by the manufacturer for equipment or a part thereof, and which indicates the defined endurance of its insulation against transient (brief, duration of a few milliseconds) over-voltages. The impulse withstand voltage is the highest value of the surge voltage of a defined form and polarity which will not result in the dielectric breakdown of the insulation under defined conditions.

Depending upon the indicated pollution degree, the rated surge voltage varies in accordance with the clearance distance between the individual contacts or contacts to the housing (see Table F.2 in IEC 60664-1:2020 [VDE 0110-1:2022-07]). The corresponding rated surge voltages for the connectors and cable assemblies can be determined in this manner if the loads with transient over-voltages in the application need to be taken into account.

If a “periodic peak voltage” is present for a long time over the service life (more than approximately 60 minutes), this is not an over-voltage as regards insulation dimensioning under the terms of the standard, but must be considered a continuous voltage instead. In such cases, the “periodic peak voltage” must be used as the operating voltage.

#### INFLUENCE OF POLLUTION DEGREE ON THE INSULATION COORDINATION

Any pollution combined with moisture can influence the insulation capacity on the surface of the connector. In order to define various rating parameters, a pollution degree must be selected for the equipment according to the criteria listed below.

All the technical specifications of the mains and high voltage inserts in this catalog are based on pollution degree 3.

Pollution degree 3 is used, for example, for devices in industrial, commercial, and agricultural operations, unheated storage areas, and workshops. Conductive pollution is present or dry, non-conductive pollution that will become conductive because condensation is expected.

Higher voltages may be possible if the pollution degree is defined as less than 3. Please contact us for more details about the connectors performance specified for pollution degree 2 or 1.

## HOUSING MATERIALS / SURFACES

Component	Material designation	Surface
Housing	PSU / PEI / Brass	Chrome (metal version)
Back nut / Cable collet / Front nut / Mounting nut	PSU / PEI / PA	
Insulator	PEEK / PBT / PSU

# TERMINATION TECHNOLOGIES

In general, insulators with socket contacts are installed in the live part (to provide protection from accidental touch). The means of mounting the contacts in the insulator is important on account of the termination technologies. Termination technologies for ODU MEDI-SNAP® connectors include: soldering, crimping and PCB.

## SOLDER TERMINATION

## CRIMP-CLIP-CONTACT FOR PEEK INSULATOR

## PRINT TERMINATION

## TERMINATION TECHNOLOGIES FOR TURNED CONTACTS

### Solder termination

The contacts are mounted in the insulator before the single connectors are assembled. An insulator with pre-installed contacts is referred to as a contact insert.

### Crimp termination

Here, the individual contact is connected to the individual wires via deformation in the termination area. Then the contacts are individually installed in the insulator. Accordingly, insulators and individual contacts – and not complete contact inserts – are supplied for the crimp termination. The contact processing for the production of connecting cables via crimping creates a secure, durable and corrosion-free contact. Cold compaction (crimping) compresses the conductor and contact material to the press points so as to form a gas-tight connection with tensile strength to fit the conductor material. 8-point deformation is generally used for turned crimp contacts.

### PCB termination

This is only used in the receptacle if the receptacle is to be mounted directly on a printed circuit board (PCB). Further information is available upon request.

The American Wire Gauge (AWG) is based on the principle that the cross-section of the wire changes by 26 % from one gauge number to the next. The AWG numbers decrease as the wire diameter increases, while the AWG numbers increase as the wire diameter decreases. This only applies to solid wire.

However, stranded wire is predominately used in practice. This has the advantage of a longer service life under bending and vibration as well as greater flexibility in comparison with solid wire.

Stranded wires are made of multiple, smaller-gauge wires (higher AWG number). The stranded wire then receives the AWG numbers of a solid wire with the next closest cross-section to that of the stranded wire. In this case, the cross-section of the stranded wire refers to the sum of the copper cross-sections of the individual wires.

Accordingly, strands with the same AWG number but different numbers of wires differ in cross-section. For instance, an AWG 20 strand of 7 AWG 28 wires has a cross-section of 0.563 mm<sup>2</sup>, while an AWG 20 strand of 19 AWG 32 wires has a cross-section of 0.616 mm<sup>2</sup>.

Source: ASTM

# CURRENT LOAD OF TURNED CONTACTS

Nominal single contact current load for pin / slotted socket (nominal diameter 0.5 mm – 2 mm)

## UPPER LIMIT TEMPERATURE OF STANDARD CONTACTS: +120 °C

The wire cross-section shown in the legend was connected as test cable. In the case of multi-position connectors and cables, the heating is greater than it is with individual contacts. For that reason, it is calculated with a reduction factor. For connectors, the reduction factors for multi-core cables pursuant to VDE 0298-4:2013-06 are applied. The reduction factor is factored in at 5 live wires and up.

## DERATING CURVE

The corrected current-carrying capacity curve, derived from the base curve determined (0.8 x measured current). It factors in manufacturing tolerances as well as uncertainties in temperature measurement and measurement arrangement, see derating measurement method.

## RATED CURRENT (NOMINAL CURRENT)

The metrologically determined current which is permitted to flow continuously through all contacts at the same time and will increase the contact temperature by 45 Kelvin. The amperage is determined according to the derating measurement method (IEC 60512-5-2:2002 [DIN EN 60512-5-2:2003-01]) and derived from the derating curve.

## DERATING FACTOR

Number of loaded wires	Derating factor
5	0.75
7	0.65
10	0.55
14	0.50
19	0.45
24	0.40

# IEC 60601-1:2005 (3<sup>RD</sup> EDITION)

The ODU MEDI-SNAP® (plastic connectors only) offers a maximum on electrical safety, in particular the highest patient protection against electrical shock according IEC 60601-1:2005 (VDE 0750-1:2013-12). Mainly in applications located in the direct proximity to patients and operators, the approval authorities place maximum requirements on the electrical safety of medical products and the well-being of patients.

This includes:

- 1. MEANS OF PROTECTION
- 2. ELECTRICAL DISCHARGE TEST (ESD)
- 3. ELECTRICAL FINGER TEST

## 1. MEANS OF PROTECTION

In order to protect patients as well as operators from the risk of electrical shock from live devices, medical devices must ensure suitable means of protection. Depending on application and regulations, the specification of means of protection can differ.

Direct patient environment according IEC 60601-1:2005 requires two means of protection for both patients and operators must be applied in electrical medical equipment and systems (2 MOPP and/or 2 MOPP). This approach ensures, if one means of protection fails, the other takes effect.

The following table is valid for a electrical medical device with a working mains voltage of max. 250 V AC (degree of pollution 2).

To ensure the required clearance and creepage distance in the termination area of plug style A5, a corresponding potting sleeve must be used (not included in the scope of delivery).

MOPP / MOPP	Clearance distance to the test finger mm	Creepage distances to the test finger mm	Test voltage V AC
1 MOPP	≥ 2	≥ 2.5	1,500
2 MOPP	≥ 4	≥ 5	3,000
1 MOPP	≥ 2.5	≥ 4	1,500
2 MOPP	≥ 5	≥ 8	4,000

To guarantee the means of protection described, the corresponding clearance and creepage distances to touchable conductive components in mated condition must be ensured.

The measurement of clearance and creepage is visualized based on the cross sectional view of a mated pair ODU MEDI-SNAP® size 1 (receptacle style G4, plug style S1).

The particular means of protection are valid for all available contact inserts. Please see the corresponding means of protection of each individual connector style at the connector details.

# IEC 60601-1:2005 (3<sup>RD</sup> EDITION)

## 2. ELECTRICAL DISCHARGE TEST (ESD)

The ODU MEDI-SNAP® withstand electrical discharge up to  $\pm 15$  kV [air]<sup>1</sup>. Therefore, the connector is perfectly secured against voltage punctures from outside. Such voltage punctures can cause malfunctions or other electrical safety problems which need to be avoided in mated condition.

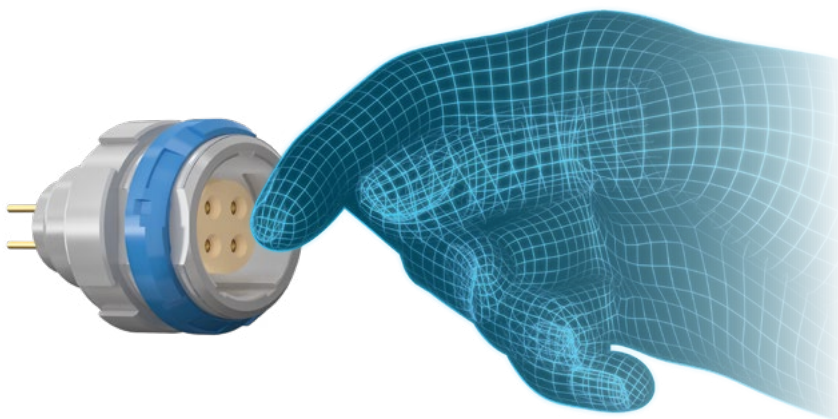

Environmental phenomena	Reference	Test specification
Electrostatic discharge (ESD), enclosure port	IEC 61000-4-2:2008	Contact $\pm 8$ kV Air $\pm 15$ kV
Electrostatic discharge (ESD), patient coupling port	IEC 61000-4-2:2008	Contact $\pm 8$ kV Air $\pm 15$ kV
Electrostatic discharge (ESD), signal input/output coupling port	IEC 61000-4-2:2008	Contact $\pm 8$ kV Air $\pm 15$ kV

<sup>1</sup> Valid for plastic connectors in mated condition

- Size 1: receptacle style G4, G9, GA
- Size 2: receptacle style G4
- Size 3.5: all receptacles listed in the catalog

## 3. ELECTRICAL FINGER TEST

The finger test ensures that in unmated condition the electrical contacts are not accessible. This is the case for all ODU MEDI-SNAP® connectors with socket inserts shown in this catalog. (Exemplary see size 2 receptacle style G5)

# INTERNATIONAL PROTECTION CLASSES

Acc. IEC 60529:1989 (VDE 0470-1:2014)

Code letters (International Protection)		First code number (Degrees of protection against access to hazardous parts respectively against solid foreign objects)		Second code number (Degrees of protection against water)		
IP		6		5		
Code number	Protection against access to hazardous parts / Protection against ingress of solid foreign objects			Code number	Protection against harmful effects due to the ingress of water	
0	No protection		No protection against contact / No protection against solid foreign objects	0	No protection against water	No protection against water
1	Protection against large foreign objects		Protection against contact with the back of the hand / Protection against solid foreign objects $\varnothing \geq 50$ mm	1	Protection against dripping water	Protection against vertically falling waterdrops
2	Protection against medium-sized foreign objects		Protection against contact with the fingers / Protection against solid foreign objects $\varnothing \geq 12.5$ mm	2	Protection against angular dripping water (from angles)	Protection against waterdrops falling at an angle (any angle up to 15° of the vertical)
3	Protection against small foreign objects		Protection against contact with tools / Protection against solid foreign objects $\varnothing \geq 2.5$ mm	3	Protection against spray water	Protection against spray water (any angle up to 60° of the vertical)
4	Protection against granular foreign objects		Protection against contact with a wire / Protection against solid foreign objects $\varnothing \geq 1.0$ mm	4	Protection against splashing water	Protection against splashing water from any direction
5	Dustproof		Protection against contact with a wire / Protection against uncontrolled ingress of dust	5	Protection against water jet	Protection against water jet from any direction
6	Dustproof		Protection against contact with a wire / Complete protection against ingress of dust	6	Protection against powerful water jet	Protection against powerful water jet from all directions
				7	Protection against the effects of temporary immersion in water	Protection against ingress of water negatively impacting the proper function by temporary submersion into water
				8	Protection against the effects of continuous immersion in water	Protection against ingress of quantities of water negatively impacting the proper function by continuous submersion into water
				9	Protection against high pressure water jet featuring high temperatures	Protection against water from all directions characterized by high pressure and high temperatures

# AUTOCLAVING OF ODU MEDI-SNAP®

The ODU MEDI-SNAP® connectors are also available for the following sterilization processes: Steam sterilization with pre-vacuum or gravitation process. The connectors are tested with autoclave equipment in accordance with DIN EN 13060:2019-02 at +134 °C.

For other sterilization processes like Sterrad / ETO and Gamma, please contact us. For autoclavable system solutions, we recommend our silicone overmolded cable assemblies.

**Silicone overmolding**  
and free samples on request,  
please contact [sales@odu.de](mailto:sales@odu.de)

Sterilization curve

Size	Autoclaving	
	Push-pull plug	Break-away plug
	PEI	PSU
1.0	200	500
2.0		200
3.5 <sup>1</sup>		—

For information about autoclaving of receptacles, please contact us.

<sup>1</sup> Max. 2000 mating cycles if autoclaving is required.

Please also find further autoclavable solutions with our [ODU MINI-SNAP® Series L/K/B](#) and [ODU AMC® High-Density matt chromium series](#) of connectors.

# TECHNICAL TERMS

## AMBIENT TEMPERATURE

Temperature of the air or other medium in which a connector or a corresponding cable assembly is intended to be used.

## AUTOCLAVABILITY

See page [121](#).

## AWG

American Wire Gauge – see page [115](#).

## BASE CURVE

See page [116](#).

## CHEMICAL RESISTANCE

Chemical resistance is the ability of a material to protect itself against chemical attack or solvent reaction. In contrast to corrosion, there is no material removal, which is particularly typical for plastics and elastomers.

Adhesives, cleaning agents or other chemicals are often used on our products within the scope of general deployment and further handling. Contact with unsuitable chemicals may have an adverse effect on the mechanical and electrical properties of the insulation and housing materials. The connector specifications may no longer be sustainable. Please observe our handling suggestions and technical instructions as given in this catalog or corresponding assembly instructions.

## CLEARANCE DISTANCE

The shortest distance by air between two conductive parts (according to IEC 60664-1:2020 [VDE 0110-1:2022-07]).

## CODING (MECHANICAL)

Geometry detail that prevents interchangeability of otherwise identical connectors. This is useful when two or more identical connectors are attached to the same device.

## CONNECTOR WITH BREAKING CAPACITY (CBC)

Connector that may be mated or unmated during intended use, live or under load (according to IEC 61984:2008 [VDE 0627:2009-11]).

## CONNECTOR WITHOUT BREAKING CAPACITY (COC)

Connector which is not deemed to be engaged or disengaged in normal use when live under load (according to IEC 61984:2008 [VDE 0627:2009-11]).

## CONNECTORS

An element which enables electrical conductors to be connected and is intended to create and/or separate connections with a suitable counterpart (according to IEC 61984:2008 [VDE 0627:2009-11]). If not otherwise specified, these are connectors without breaking capacity (COC).

## CONTACT RESISTANCE

Total resistance value measured from terminal to terminal. In this case, the resistance is significantly lower than the contact resistance. The specifications are average values.

## CORES

Electrical conductor, solid wire or multi-wire strand, with insulation as well as any conductive layers. Cables or leads may have one or more cores.

## CREEPAGE DISTANCE

The shortest distance between two conductive parts along the surface of a solid insulation material IEC 60664-1:2020 [VDE 0110-1:2022-07]. This factors in all elevations and recesses in the insulator, as long as defined minimum dimensions are on hand.

## CRIMP BARREL

A terminal sleeve which can accommodate one or more conductors and be crimped by a crimping tool.

## CRIMP CONNECTION (CRIMP TERMINATION)

The permanent, non-detachable and solder-free mounting of a contact to a conductor via deforming or shaping under pressure to make a good electrical and mechanical connection. Executed with crimping tool, press or automatic crimping machine (see page [104 ff](#)).

## CRIMPING AREA

The specified area of the crimp barrel in which the crimp termination is executed by means of deforming or shaping the barrel under pressure around the conductor.

## DELIVERY FORM

Connectors can be delivered in assembled form or as individual parts.

## DERATING CURVE

The corrected current-carrying capacity curve, derived from the determined base curve ( $0.8 \times$  measured current). It factors in

# TECHNICAL TERMS

manufacturing tolerances as well as uncertainties in temperature measurement and measurement arrangement, See derating measurement method.

## DERATING MEASUREMENT METHOD IN ACCORDANCE WITH IEC 60512-5-2:2002 (DIN EN 60512-5-2:2003-01)

See page [116](#).

## INSERTION AND WITHDRAWAL FORCE

The force required to fully insert or withdraw pluggable elements without the influence of a coupling or locking device.

## INSULATOR

Part of a connector that separates conductive parts with different potential, usually identical to the contact carrier

## MATING CYCLES

A mating cycle consists of one insertion and withdrawal action of both connector parts with each other. The given values are only valid under the following conditions: clean environment, adequate radial alignment, flawless counter contact pins.

## MAX. CONTINUOUS CURRENT

The metrologically determined amperage at room temperature (approx. +20° C) which increases the contact temperature to the limit temperature. The values specified in the catalog apply to either individual contacts or completely assembled inserts / modules, as indicated. Refer to page [116](#) for the derating curve, if a different ambient temperature is valid

## NOMINAL CURRENT

see Rated Current

## NOMINAL SINGLE CONTACT CURRENT LOAD

The current-carrying capacity which each individual contact can be loaded with on its own (see page [116](#))

## NOMINAL VOLTAGE

The nominal voltage of the power source for which the connector is being used. The nominal voltage may not be higher than the rated voltage of the connector.

## OPERATING TEMPERATURE

Permissible temperature range between the uppermost and lowermost limits. This includes contact heating through current-carrying capacity.

## OPERATING VOLTAGE

The operating voltage is the voltage supply at the device. The operating voltage may not be higher than the rated voltage of the connector.

## OVERVOLTAGE CATEGORY

Numeral defining a transient overvoltage condition as defined in Table F.1 in IEC 60664-1:2020 (VDE 0110-1:2022-07)). This table provides the value of the rated impulse voltage that must be met.

## PCB TERMINATION

A conductive connection between the PCB and an element in through-hole assembly, THT (through-hole technology).

## POLLUTION DEGREE 1

No or only dry, non-conductive pollution is present. The pollution has no influence. For example, this is common for computer systems and measuring instruments in clean, dry, or air-conditioned rooms.

## POLLUTION DEGREE 2

(= standard, if no specific pollution degree is indicated)

Only non-conductive pollution is present. However, temporary conductivity due to condensation must be anticipated. For example, this is common for devices in laboratories, residential, sales, and other business areas.

## POLLUTION DEGREE 3

Conductive pollution is present or dry, non-conductive pollution that will become conductive because condensation is expected. For example, this is common for devices in industrial, commercial, and agricultural operations, unheated storage areas, and workshops.

## PRINTED CIRCUIT BOARD (PCB)

A PCB is a carrier for electronic components. It serves the purposes of mechanical mounting and electrical connection.

## RATED IMPULSE VOLTAGE

The specified rated impulse voltage confirms the dielectric withstand voltage and thereby the withstand capability of its insulation against transient overvoltages according to the standard by applying the test voltage according to Table F.6 in IEC 60664-1:2020 (VDE 0110-1:2022-07)) over a defined time range.

# TECHNICAL TERMS

## RATED CURRENT (NOMINAL CURRENT)

See page [116](#).

## RATED VOLTAGE

The rated voltage which the manufacturer specifies for a connector and which the operating and performance features relate to.

## REDUCTION FACTOR

Based on VDE 0298-4:2013-06, connectors and cables with more than 5 contacts have a higher heating rate compared to individual contacts. For this reason, the aforementioned standard is calculated with a reduction.

## SOLDER CONNECTION (SOLDER TERMINATION)

Termination technology in which a molten additional metal (solder) with a lower melting point than the base materials to be connected is used to attach two metallic materials to one another.

## STRANDED WIRE

The stranded wire is an electrical conductor consisting of thin individual wires and is therefore easy to bend.

## SURGE VOLTAGE

The generic term for high impulse test voltages used to test power supply equipment.

## TERMINATION CROSS-SECTION

The specified cross-sections correspond to a "fine-wire" conductor structure (7/19 wire) according to AWG (ASTM B258-14) or to a "fine-wire" conductor structure pursuant to IEC 60228:2004 (VDE 0295:2005-09; Class 5), borderline conductor structures require a separate review.

## TERMINATION TECHNOLOGIES

Methods for connecting the leads to the electro-mechanical element, such as solder-free connections pursuant to IEC 60352 (DIN EN 60352): crimp, screw connection etc. or soldering connection (see page [114](#)).

## TEST VOLTAGE

The test voltage which a connector or a corresponding cable assembly can withstand under defined conditions without dielectric breakdown or flashover.

## TIGHTNESS IEC 60529:1989 (VDE 0470-1:2014-09)

See protection types on page [120](#).

## TOTAL RESISTANCE

Total resistance value measured from terminal to terminal (e.g. without crimp resistance).  
The specifications are average values.

## WIRE

Solid conductor

## WORKING VOLTAGE

According to IEC 60664-1:2020 (VDE 0110-1:2022-07) standard „Highest r.m.s. value of the a.c. or d.c. voltage across any particular insulation which can occur when the equipment is supplied at rated voltage.“

---

#### GENERAL NOTE

The connectors and cable assemblies listed in this catalog are generally designed as connectors without breaking capacity unless otherwise stated. The rated voltage specification given on the respective data sheet must be respected. Suitable precautionary measures must be taken to ensure that people do not come into contact with live conductors during installation and operation. All entries in this catalog were thoroughly reviewed before printing. ODU reserves the right to make changes based on the current status of knowledge without prior notice and without being obliged to provide replacement deliveries or refinements of older designs.

---

Printed on certified recycled paper.

All dimensions are in mm.  
Some figures are for illustrative purposes only. Subject to change without notice. Errors and omissions excepted. We reserve the right to change our products and their technical specifications at any time in the interest of technical improvement. This publication supersedes all prior publications.
